

Visilift+ is a mobile interactive touch display designed for a variety of learners of all ages and abilities, including individuals with disabilities. It expands opportunities to learners who would benefit both visually and physically from a larger display.

- Adjustable height and full range of tilt positions
- Reinforced glass and antibacterial case
- Up to 20 simultaneous touch points
- Available with built-in PC and software options

Visilift+ helps students engage with a touch screen in ways that were previously difficult. The screen can be raised and lowered, and set vertically, horizontally like a table, or at a variety of angles to suit the needs of the individual.

MOBILE:

Visilift+ can be easily wheeled from room to room with its braking castors, allowing for flexible use of space.

DURABLE:

Visilift+ uses a reinforced commercial grade 4K LCD screen, so it's able to withstand tough use. The soft-touch casing has an anti-bacterial surface.

FLEXIBLE:

In addition to the tilt feature, the screen can be divided into different quadrants, so multiple students interact at the same time. The Visilift+ recognizes up to 20 touch points at once.

The Visilift+ is available with or without a built-in PC. The built-in PC version includes a free software package – your choice of Imagine, Snowflake, or Classmate. Each software package is available for purchase. Software packages offer a suite of themes, images, and games to enhance any learning environment and provide engagement opportunities for students of all ages and abilities.
