

Before
FAÇADE RESTORATION

After
FAÇADE RESTORATION

A restored façade is more than just a pretty face..

It's peace of mind.

Over time, water penetrating your building through cracks in the façade can lead to falling debris, safety issues, even façade failure. Façades also fade from UV exposure, and finish degradation. Compared to replacement, façade restoration costs much less, is better for the environment, and is much less disruptive.

Instead of an expensive, disruptive replacement, Tremco can help protect, improve, and beautify your school's aging façades with solutions that will:

- ✓ Keep water and pests out of the school
- ✓ Prevent expensive future repairs
- ✓ Reduce energy loss
- ✓ Improve indoor air quality
- ✓ Restore your building's exterior

So this fall is a perfect time for a building check-up!

Contact us today to start your free building assessment and see how façade restoration qualifies for ESSER funding.
